

new seminar series on

METHODS IN PERSONALISED MEDICINE

Interested in learning more about liquid biopsies, genome-wide association studies, and polygenic score? Have you wondered about ethical considerations and approval processes involved using genetic data? Or are you simply curious to learn more about new research methods to improve your research? Then, these seminars may be of interest to you.

Each seminar will begin with a general theoretical introduction to the field by a senior researcher, followed by short presentations of ongoing research projects within the specific field. The seminars are targeted early career researchers and students interested in methods applied in personalised medicine; however, all are welcome.

The topic of the first seminar:

LIQUID BIOPSIES & ctDNA

Date and time

Thursday 11th June
12:00 – 13:30

Location

Department of Molecular Medicine
Brendstrupgårdsvej 21 A, 8200 Aarhus N

Tenna Henriksen, postdoc from Department of Molecular Medicine, Aarhus University Hospital, will give an overall introduction to the field (30 min.) followed by presentation of specific research projects. **If you work within this field and are interested in giving a short presentation of your project, please let us know.**

Lunch will be provided – registration is required

Registration at: [Researchers Lunch - LIQUID BIOPSIES & ctDNA](#)
